

DevOps or DevSecOps? One Page Assessment

Mark an answer per question, tally your letters, find your result below.

D DevOps

S DevSecOps

C Cloud / Security first

F Foundations first

1. Current role

D developer · C infra / cloud · S security / risk · F support / generalist

2. Main responsibilities

D building features · C maintaining systems · S risk / audits · F mixed tasks, still learning

3. Coding / scripting comfort

D very comfortable · C somewhat · S limited but understood · F not yet comfortable

4. Linux / infra / cloud comfort

C very comfortable · D somewhat · S limited, more conceptual · F not yet comfortable

5. Interest in security

S high · C moderate to high, cloud angle · D moderate · F not considered yet

6. Interest in automation / delivery

D high · C moderate to high, reliability angle · S moderate · F limited exposure yet

YOUR TALLY, WHICHEVER LETTER YOU MARKED MOST IS YOUR LIKELY DIRECTION

D _____

S _____

C _____

F _____

Mostly D, DevOps

Docker first, then CI/CD, Terraform, and Kubernetes. Your coding comfort is a real head start.

Mostly S, DevSecOps

Linux, Git, and scripting first, then Docker and a real CI/CD pipeline before security tooling.

Mostly C, Cloud / Security first

A genuine two way fork. Decide deliberately, then follow the D or S sequence from there.

Mostly F, Foundations first

Linux, Git, and basic scripting first. Revisit this assessment in six to eight weeks.
